

Documents Dashboard — Formula Specification

Governance module · per-section scoring model · endpoint GET
/governance/dashboard/documents-overview · 3 July 2026

Scoring Model

Each functional area (page) of the module is a **section** with its own metrics, computed from that area's own database rows. Every metric is returned with its numerator n, denominator d, weight w, target (85) and formula string; the frontend only renders. On the dashboard cards, achievement metrics display n/d as the good count over its universe; health metrics display the bad count over its universe and score the inverse.

```
achievement metric:  M = (n / d) × 100
health metric:       M = (1 - n/d) × 100
section score:       S = ( M1·w1 + M2·w2 + ... ) / ( w1 + w2 + ... )   over metrics with d > 0
module score:        P = ( S1·W1 + S2·W2 + ... + S8·W8 ) / ( W1 + ... + W8 )   over sections with data
```

Grade: P >= 85 excellent · P >= 70 good · P >= 50 fair · P < 50 poor. Weights and targets are defined server-side only.

Sections and Formulas

1. Documents (module weight W = 0.18)

Pages: Document Register, Document Detail · tables: grc_governance_documents, grc_policy_statements, grc_policy_gap_findings

Metric	w	Formula
Publishing	0.20	published documents / active (non-archived) documents
Freshness	0.20	1 - (published docs expired or review-overdue / published docs)
Well-formed	0.15	docs with owner + classification + review cycle / active docs
Has content	0.15	docs with an uploaded file or authored content / active docs
Statements parsed	0.15	docs with parsed policy statements / docs that have content
Gaps remediated	0.15	gap findings closed or risk-accepted / all non-compliant findings

Worked example (live demo data): $S_1 = 50.0(.20) + 83.3(.20) + 100(.15) + 83.3(.15) + 50.0(.15) + 40.0(.15) = 67.7$

2. Mappings (module weight W = 0.18)

Pages: Mappings, Detail > Controls, statement auto-map · tables: document_control/risk/regulatory/asset_links, statement_control_mappings

Metric	w	Formula
Docs mapped	0.45	active docs linked to >= 1 control / risk / framework / asset / active docs
Statements mapped	0.35	active statements with >= 1 control mapping / active statements
Full-coverage maps	0.20	statement mappings with coverage_type = full / all statement mappings

Worked example (live demo data): $S_2 = 66.7(.45) + 70.0(.35) + 57.1(.20) = 65.9$

3. Approvals & Sign-off (module weight W = 0.14)

Pages: My Approvals, Workflows, sign-off flow · tables: document_approval_steps, document_signatures, document_signoff_assignments

Metric	w	Formula
Queue health	0.40	1 - (overdue pending steps / pending steps)
Approval rate 90d	0.30	steps approved / steps decided, last 90 days
Signed-off published	0.30	published docs with a recorded approver signature / published docs

Worked example (live demo data): $S_3 = 50.0(.40) + 80.0(.30) + 66.7(.30) = 64.0$

4. Reviews (module weight W = 0.14)

Pages: Reviews, Review Calendar · tables: governance_documents (review columns), policy_review_history

Metric	w	Formula
Schedule coverage	0.25	approved/published docs having a next review date / approved + published docs
Schedule health	0.45	1 - (overdue reviews / docs with a review schedule)
On-time reviews 12m	0.30	reviews completed on/before scheduled date / completed reviews, 12 months

Worked example (live demo data): $S_4 = 100(.25) + 85.7(.45) + 66.7(.30) = 83.6$

5. Exceptions (module weight W = 0.09)

Page: Exceptions · table: grc_policy_exceptions (incl. closed_at, promoted_risk_id)

Metric	w	Formula
Containment	0.60	1 - ((pending + expiring within 30d) / total exceptions)
Closed on time	0.40	exceptions closed on/before expiry / closed exceptions with both dates

Worked example (live demo data): $S_5 = 50.0(.60) + 100(.40) = 70.0$

6. Attestations (module weight W = 0.09)

Pages: Attestations, Campaigns, My · tables: attestation_campaigns, attestation_requests

Metric	w	Formula
Completion 12m	0.50	completed requests / all requests assigned in last 12 months
Overdue containment	0.30	1 - (overdue open requests / open requests)
Evidence linked	0.20	completed attestations linked to evidence / completed attestations

Worked example (live demo data): $S_6 = 60.0(.50) + 50.0(.30) + 0.0(.20) = 45.0$

7. Committees (module weight W = 0.09)

Pages: Committees, Meetings, Actions · tables: governance_committees, committee_meetings, meeting_minutes, oversight_actions

Metric	w	Formula
Action health	0.30	1 - (overdue oversight actions / open oversight actions)
Actions completed	0.20	completed oversight actions / all oversight actions
Meeting cadence	0.20	active committees that met in last 90 days / active committees
Minutes recorded	0.15	completed meetings (180d) with minutes / completed meetings (180d)
Quorum met	0.15	held meetings that reached quorum / held meetings with quorum data

Worked example (live demo data): $S_7 = 66.7(.30) + 25.0(.20) + 100(.20) + 100(.15) + 100(.15) = 75.0$

8. Regulatory (module weight W = 0.09)

Pages: Regulatory Changes, Regulatory Feeds · tables: regulatory_changes, regulatory_impact_assessments, regulatory_implementation_tasks, regulatory_feed_sources/items

Metric	w	Formula
Changes resolved	0.25	changes completed or not-applicable / all regulatory changes
Changes assessed	0.25	applicable changes with >= 1 impact assessment / applicable changes
Task health	0.20	1 - (overdue implementation tasks / open implementation tasks)
Feed items triaged	0.15	feed items processed or ignored / all ingested feed items
Feeds polling	0.15	active sources successfully polled in last 7 days / active sources

Worked example (live demo data): $S_8 = 33.3(.25) + 66.7(.25) + 50.0(.20) + 75.0(.15) + 100(.15) = 61.3$

Module Performance Score

$$P = S_1(.18) + S_2(.18) + S_3(.14) + S_4(.14) + S_5(.09) + S_6(.09) + S_7(.09) + S_8(.09)$$
$$= 67.7(.18) + 65.9(.18) + 64.0(.14) + 83.6(.14) + 70.0(.09) + 45.0(.09) + 75.0(.09) + 61.3(.09)$$
$$= 12.19 + 11.86 + 8.96 + 11.70 + 6.30 + 4.05 + 6.75 + 5.51 = 67.3 \rightarrow \text{grade fair}$$

Attention Queue (absolute counts, not scored)

total = docs awaiting approval + overdue reviews + docs expiring 30d + exception attention + open gap findings + overdue attestations + overdue oversight actions + overdue regulatory tasks

Edge Rules (no division by zero)

d = 0, achievement metric -> M = null; metric excluded and the section re-normalizes the remaining weights.

d = 0, health metric -> M = 100 (no obligations = healthy).

all metrics null -> S = null; section excluded and module weights re-normalize.
